

Table 11. Pap Smear Testing, Combined Years 1989, 1991-1994

These are estimated percentages of women (age 18+) who reported having had a Pap smear within the past 2 years (excluding women who reported having had a hysterectomy). Percentages were estimated by aggregating interviews conducted in 1989 and from 1991 to 1994 (data were not obtained in 1990).
